SATRON VCT Optical Consistency Transmitter

BCs220
07.04.2021
Rev 11

The VC family of transmitters measures process parameters by transmitting strobes of light into the pulp and measuring the back-scatter characteristics. Measurement values are calibrated by sampling and laboratory analysis of process.

SATRON VCT is an optical total consistency transmitter that is suitable for all pulps, in consistency range of 0...12%Cs in applications located in a wide range of paper machine and pulp mill applications. The Satron VC provides an accurate and reliable consistency measurement without the need for regular maintenance and is equipped with a retraction mechanism that allows probe change during the process run.

Probe options

Standard measuring probe

(Selection code option 0)*

Remote measuring probe, IP68

(Selection code option R)*

Remote measuring probe is recommended in mounting places where high vibration or high humidity may affect the measuring electronics.

*see selection chart on last page

Remote Display Unit

The Remote Display Unit (RDU) provides a local display of the measured values and serves also as a simple menu-driven calibration and troubleshooting interface. The RDU includes two analog 4-20 mA outputs, three dry contact binary inputs and three contact outputs.

Device enclosure options

Connection Box (K)

Remote electronics in the device enclosure. External sample switch mounted on the right face of the cabinet. Power supply 115/230 V 50/60 Hz, code K. Compatible with housing type L and probe type R with display.

Product code: M1325065

Connection Box (KF)

Remote electronics in the device enclosure with flushing valve. Flushing valve installed under the cabinet. External sample switch mounted on the right face of the cabinet. Power supply 115/230 V 50/60 Hz, code K. Compatible with housing type L and probe type R with display.
